Information contained in document has been reviewed for accuracy. But it could include typographical errors or technical inaccuracies. Changes are made to the document periodically. These changes will be incorporated in new editions of the publication. QSAN may make improvements or changes in the products. All features, functionality, and product specifications are subject to change without prior notice or obligation. All statements, information, and recommendations in this document do not constitute a warranty of any kind, express or implied.

Any performance data contained herein was determined in a controlled environment. Therefore, the results obtained in other operating environments may vary significantly. Some measurements may have been made on development-level systems and there is no guarantee that these measurements will be the same on generally available systems. Furthermore, some measurements may have been estimated through extrapolation. Actual results may vary. Users of this document should verify the applicable data for their specific environment.

This information contains examples of data and reports used in daily business operations. To illustrate them as completely as possible, the examples include the names of individuals, companies, brands, and products. All of these names are fictitious and any similarity to the names and addresses used by an actual business enterprise is entirely coincidental.

VSS Application

Executive Summary

This application note provides technical guidance for setting up VSS (Volume Shadow Copy Service) solution in Windows environment and making sure that the Symantec Backup Exec 2014 will be communicated with our snapshot mechanism in Windows server, and it leads XCubeSAN products being able to achieve real DR (Disaster Recovery) with snapshot consistency.

Audience

This document is applicable for QSAN customers and partners who are interested in purchasing Symantec Backup Exec 2014 as the backup solution of XCubeSAN series. It assumes the reader is familiar with QSAN products and has general IT experience, including knowledge as a system or network administrator. If there is any question, please refer to the user manuals of products, or contact QSAN support for further assistance.

Overview

This document introduces how to perform VSS (Volume Shadow copy Service) function on QSAN subsystem. The content in this document includes the QSAN VSS installation, how to use QSAN VSS client, and using Symantec Backup Exec to perform the VSS backup.

Environments

© Server / Host

Model: ASUS RS700

OS: Windows Server 2008 Enterprise edition

Œ Storage

Model: XCubeSAN X5224S

Memory: 8GB Firmware: V1.4.1

© Software on Server / Host

QSAN_Storage_Service_Setup-2.0.7-x64-en.msi

Symantec Backup Exec 2014

Configurations

Install VSS Software

- 1. Run "QSAN_Sentvice_rSatugp_2.0.75x64-en. mfiseian"d start the setup.
- 2. Click the Next button.

Figure 1 Install VSS Software Step 1

3. Check the License Agreement, and then click the Next button.

Figure 2 Install VSS Software Step 2

4. Click the **Browse...** button **t** o **c** hange **t** he install a\Progocam direct Files\QSAN\". The the Nexht biut took.

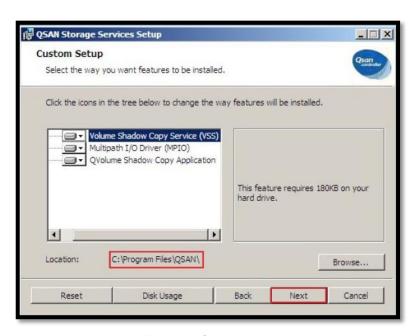

Figure 3 Install VSS Software Step 3

5. When completing all settings, click the Install button.

Figure 4 Install VSS Software Step 4

6. There is a Windows Security warning to make sure that this device software is trusted, and then click the Install button.

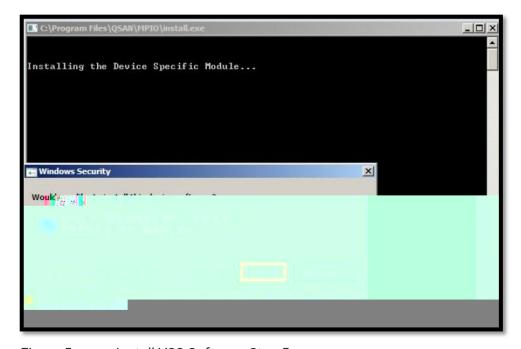

Figure 5 Install VSS Software Step 5

7. Click the Finish button to complete.

Figure 6 Install VSS Software Step 6

- 8. Please reboot the system to ensure the device software take effect.
- 9. After reboot, use the following Windows CLI command to check whether the QSAN VSS hardware provider is installed successfully.

C:> vssadmin list providers

Figure 7 Check the VSS status

Example of Using QVSSClient

- 1. Format the disk and assign a drive letter, for example "S:\". This volume is a virtual disk which comes from XS5224S.
- 2. Click the QVSSClient icon to run the application.

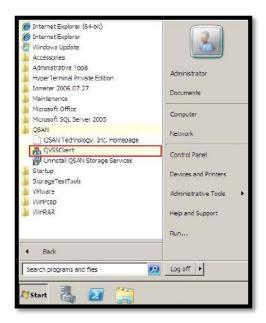

Figure 8 Run QVSSClient

3. Click the Createbutton. It will take a snapshot via VSS.

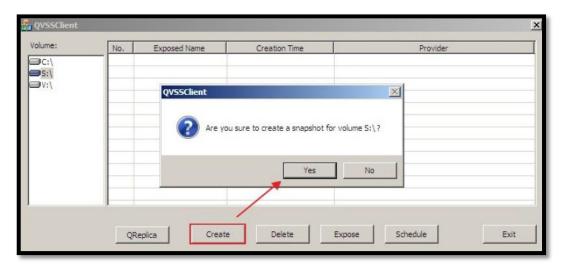

Figure 9 Create a Snapshot

4. The volume icon will be displayed in yellow while the QSAN VSS hardware provider is running.

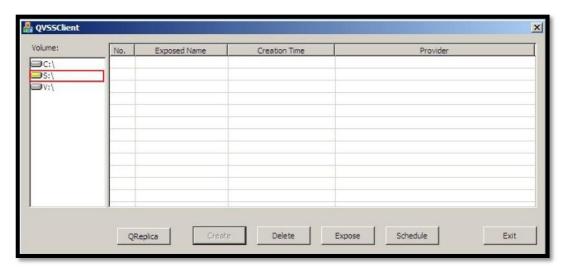

Figure 10 VSS Hardware Provider is Running

5. Observe the event log on the XS5224S, there is an associated snapshot via the VSS.

Information	Tue, Aug 13, 2019 18:48:45	[CTR1] The LUN 2 is mapped to the volume ".
Information	Tue, Aug 13, 2019 18:48:45	[CTR1] The volume " has been created.
Information	Tue, Aug 13, 2019 18:48:45	[CTR1] A snapshot on the volume 'arthur-VD1' has been taken.

Figure 11 Snapshot Event Log

6. Select the No. 1 column and click the Expose button, then select a folder. The snapshot will expose to a directory as a disk image format.

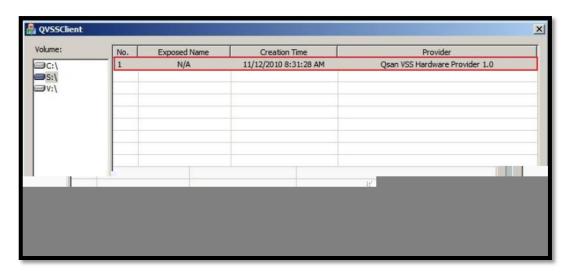

Figure 12 Expose the Snapshot

7. Click the Schedule button to enable taking snapshots by schedule.

Figure 13 Schedule the Snapshot

8. Click the Delete button to delete the snapshot.

Example of Using Symantec Backup Exec 2014

Part 1: Configurestorage devices

1. Create volumes in drives Eilerd safckup.

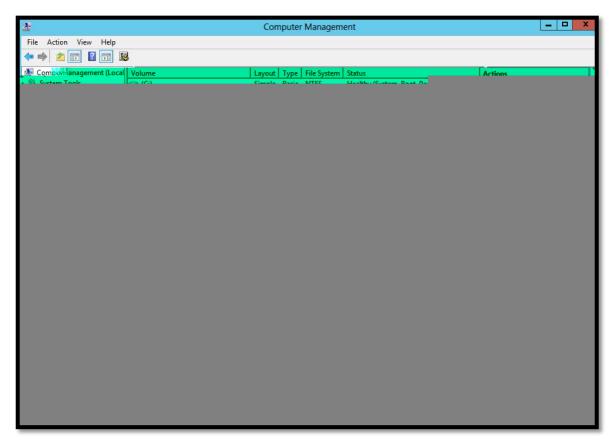

Figure 14 Create Volumes

2. First, click the Storageicon in Symantec Backup Exec 2014.

Figure 15 Storage in Symantec Backup Exec 2014

3. Select the Configure Storageicon in Storagepage.

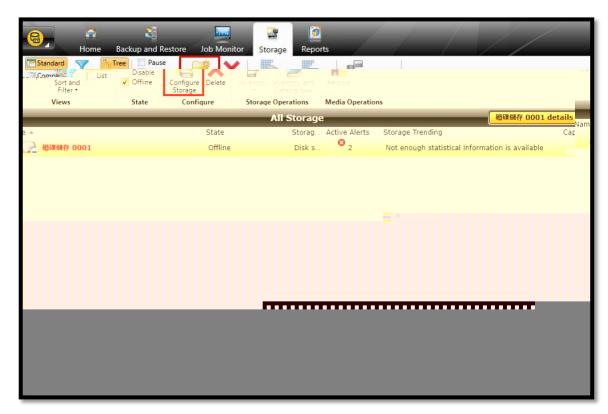

Figure 16 Configure Storage in Storage

4. Select the Disk-based storageitem, and the click the Next button.

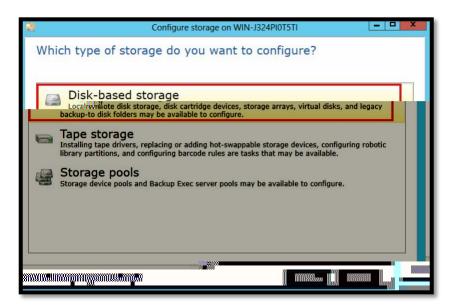

Figure 17 Select the Disk-based storage Item

5. Select the Disk Storageitem, and then click the Next button.

Figure 18 Select the Disk storage Item

6. Enter a name, and then click the Next button.

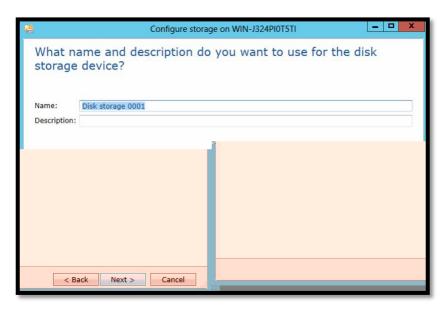

Figure 19 Enter a Name

7. Select the storage device, let's take "F:" for testing.

Figure 20 Select a Storage Device

8. Set the Concurrent write operations to 2 for write process.

Figure 21 Set it to 2

9. Check the storage configuration summary.

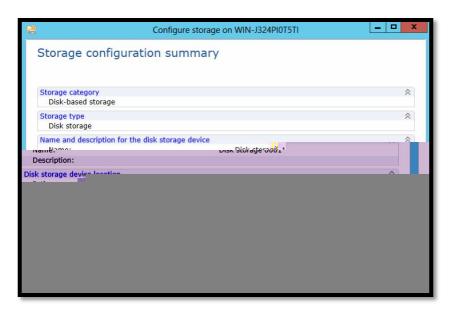

Figure 22 Storage Configuration Summary

Part 2: Perform the Symantec backup with VSS snapshot

1. Click the Backup icon in the Backup and Restorepage, and then select the Back Up to Disk item.

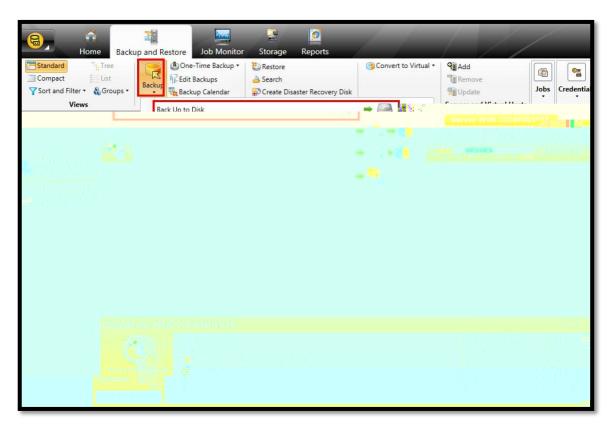

Figure 23 Backup in the Backup and Restore page

3. Select the drive letter "E:" for backup and then click the OK button.

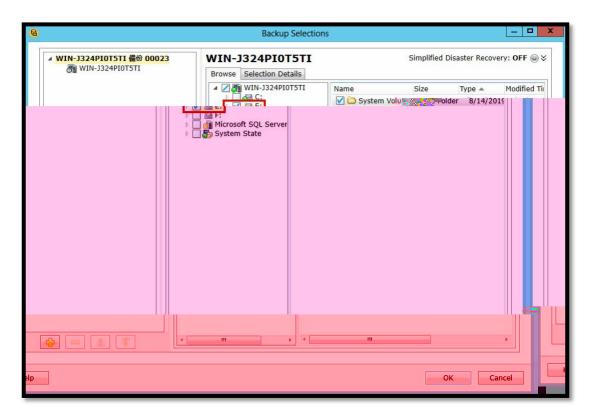

Figure 25 Select the Target

4. Click the Edit button at the right side to modify the backup setting.

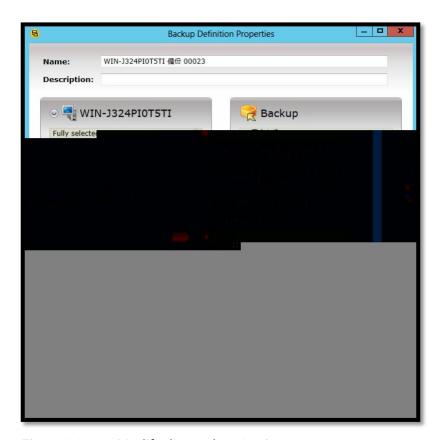

Figure 26 Modify the Backup Setting

5. In the Advanced Open File item, select the Hardware – Use technology provided by hardware manufacture item. And then click the OK button.
