1. XCubeDAS XD5300 Performance Test Report Summary

QSAN XCubeDAS XD5300 DAS systems are designed with the latest 12Gb/s SAS expander, and built for host server easy capacity expanding, application demanding high throughput, high availability, non-stop services, and flexible storage planning with cost effectiveness. With the native ability of 12Gb/s SAS and QSAN's performance optimization, the XD5300 series is both efficient and smooth for high-definition media editing, streaming, broadcasting, high performance computing (HPC) applications, massive data archiving/backup, performance-demanding applications, real time clustering, expansion to VMware Virtual SAN (VSAN Software Defined Storage), and online expansion to public or private cloud storage servers.

The XD5300 solutions set a new storage standard for direct-attached storage. The series provides a smart and elastic runtime configuration of the 10x 12Gb/s SAS wide ports with three topologies support, and allows IT managers fully utilizing the 480Gb/s data bandwidth per system for various applications. The XD5300 series is fully tested with various configurations and the maximum non cache-hit throughput of the XD5300 system is up to 24,000MB/s. The optimized 12Gb/s SAS storage system combined with Qsan's best efficient firmware, well-deployed hardware layout, guaranteed full channel bandwidth to each 12Gb/s SAS port, and central management software, enables XCubeDAS XD5300 to deliver a 24,000MB/s throughput and end-to-end 4 millions IOPS.

The following tables and charts illustrate QSAN XCubeDAS XD5300 DAS system overall performance data. All the following summaries are tested in **Non Cache-Hit** mode.

Table 1: Maximum Sequential Read IOPS

| I/O Size (Byte) | Sequential Read IOPS | Comment |
|-----------------|----------------------|---------|
| 512 | 4,269K | |

Comment *1:

The size of a NAND-flash page size varies from 2KB, 4KB, 8KB or 16KB nowadays. The smallest unit in the NAND-flash in the SSDs that can be read or written is a page. For sequential write I/O size smaller than a page size, there will be extra overhead to complete every I/O from the SSDs. Unlike hard drives, the average 512B IOPS is slower than 4K IOPS.

In the following paragraphs of this report, the 512B write IOPS are removed to reduce the deviation from the SSD overhead.

Comment *2:

The 4K random write IOPS / 656K here is tested with 24 pcs of Seagate 1200.2 Light Endurance SAS SSD 960G (Model Number: ST960FM0003). The test result here may be limited by the maximum write IOPS which this SSD can perform.

2. Test Configuration

Below is the description of the XCubeDAS XD5300 performance testing configurations, including the test environment, server hardware, operating systems, DAS storage system, SSD, and installations.

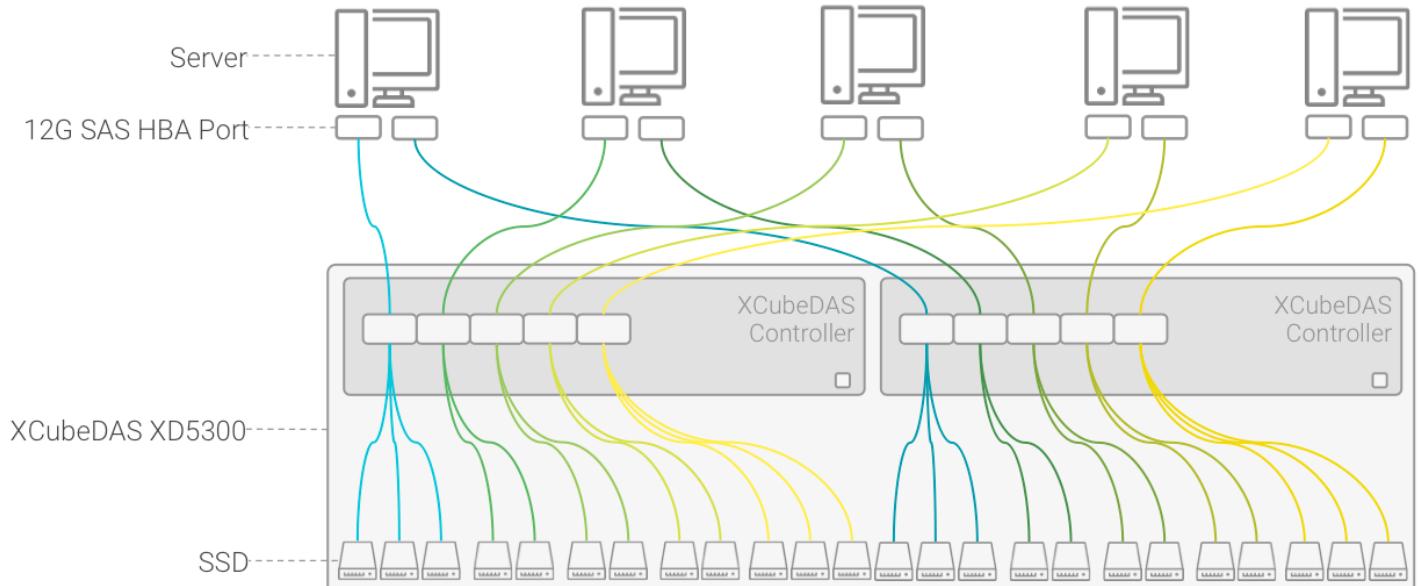

Figure 1: XCubeDAS XD5300 Performance Test Configuration

2.1. Host Configuration

The XCubeDAS XD5300 12Gb/s SAS storage system is directly attached to five different servers. Each server is installed with one Broadcom (Avago/LSI) SAS 9300-16e host bus adapter. Each HBA is connected to both controllers in the XD5300 storage system.

- Server x5
 - Asus RS700 Server, Windows Server 2012 R2, Intel Xeon CPU E5-2620 @2.0GHz, 16GB RAM
- 12Gb/s SAS HBA x5
 - Broadcom (Avago/LSI) SAS 9300-16e host bus adapter
- Iometer configuration
 - Version 2006.07.27 Dynamo
 - 1 worker per SSD
 - Non Cache-hit. All the test cases are configured as non cache-hit.
 - Queue Depth (QD, Outstanding I/Os): 4, 8, 16, 32, 64, 128, 256, and 512
 - Test cases
 - 100% Read; Sequential IOPS: 512B, 4K, 8K, 16K, 32K
 - 100% Write; Sequential IOPS: 4K, 8K, 16K, 32K
 - 100% Read; Random IOPS: 512B, 4K, 8K, 16K, 32K
 - 100% Write; Random IOPS: 4K, 8K, 16K, 32K
 - 100% Read; Sequential Throughput: 64K, 128, 256K, 512K, 1M
 - 100% Write; Sequential Throughput: 64K, 128, 256K, 512K, 1M
 - 90% Read; 10% Write; Random IOPS: 4K, 8K, 16K, 64K
 - 80% Read; 20% Write; Random IOPS: 4K, 8K, 16K, 64K
 - 70% Read; 30% Write; Random IOPS: 4K, 8K, 16K, 64K
 - 60% Read; 40% Write; Random IOPS: 4K, 8K, 16K, 64K
 - 50% Read; 50% Write; Random IOPS: 4K, 8K, 16K, 64K

2.2. XCubeDAS XD5300 Configuration

The XCubeDAS XD5300 12Gb/s SAS storage system is installed with 24 Seagate SAS SSD. Each XD5300 controller is built in with 5x 12Gb/s SAS ports; each port is configured as separated zone for different server. The detailed installation is illustrated in the "Figure 1: XCubeDAS XD5300 Performance Test Configuration".

- Storage system: QSAN XCubeDAS XD5300 12Gb/s SAS storage system, 24 bays
 - Zone 1 at XD5300 controller 1 and controller 2 port 1
 - Disk slot: 1, 2, 3, 13, 14, 15
 - 6 Iometer workers
 - Zone 2 at XD5300 controller 1 and controller 2 port 2
 - Disk slot: 4, 5, 16, 17
 - 4 Iometer workers
 - Zone 3 at XD5300 controller 1 and controller 2 port 3
 - Disk slot: 6, 7, 18, 19
 - 4 Iometer workers
 - Zone 4 at XD5300 controller 1 and controller 2 port 4
 - Disk slot: 8, 9, 20, 21
 - 4 Iometer workers
 - Zone 5 at XD5300 controller 1 and controller 2 port 5
 - Disk slot: 10, 11, 12, 22, 23, 24
 - 6 Iometer workers
- SAS SSD: Seagate 1200.2 Light Endurance 960GB; Model ST960FM0003
 - Interface: Dual 12Gb/s SAS
 - NAND flash type: eMLC
 - Sequential Read (MB/s) Peak, 128KB: 1,750MB/s
 - Sequential Write (MB/s) Peak, 128KB: 850MB/s
 - Random Read (IOPS) Peak, 4KB QD32: 190K
 - Random Write (IOPS) Peak, 4KB QD32: 35K

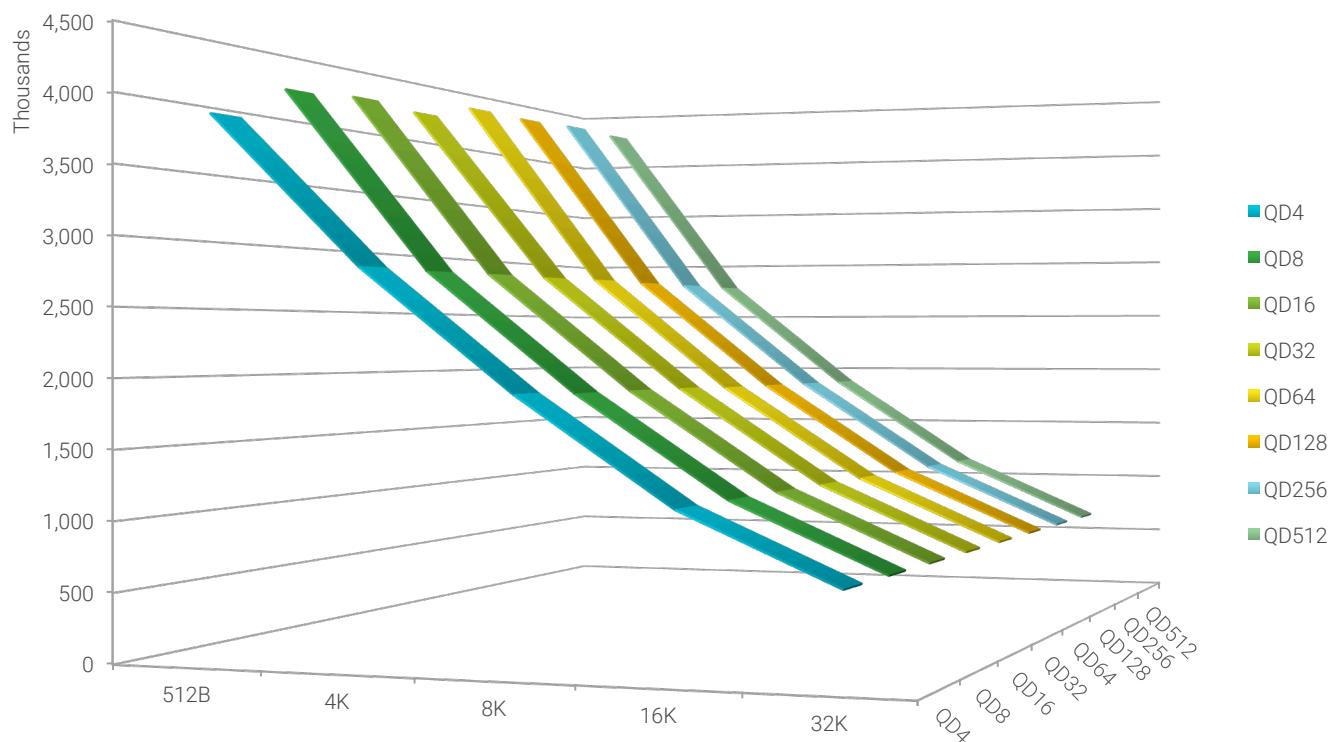

3. Performance Test Result

The following sections illustrate the XCubeDAS XD5300 test results from various combinations of IO sizes, read/write, sequential/random, and queue depths (QD, Outstanding I/Os).
